① **VIKARS**

Your way companion

About Us

Our company is the LPG & CNG and alternative fuel systems manufacturer.

We were established in Bursa in 1999. Today, we are one of the industry's most experienced manufacturer as well as , young and dynamics company with the enthusiasm of 23 years of age.

What are we doing?

As Vikars family, we are designing our own products, manufacturing and marketing, as well as, we are producing for other brands whose working in LPG & CNG conversion system and wants to be produced by **VIKARS** quality.

We also work as a boutique enterprise who can provide customized solutions to those who needs.

What can we promise?

We have achieved ambitious results in terms of fuel consumption and savings with Diesel/LPG, Diesel /CNG dual-fuel conversion system which we are launched recently.

On the other hand our success in the production of automotive industry products as LPG & CNG systems, air brake and clutch centers are already certified by our customers.

We produce high quality products at competitive prices to offer our customers.

We are happy to contribute to the conservation of nature.

Diesel Systems

VIKARS's new invention increased ratio for Diesel to Natural Gas Conversion between 40% to 70% blend. Thanks to our R&D, research and development team's proactive works which develop continuously. We also work very closely with our customers to understand their needs and we can implement solutions according to their specific requirements.

Other benefits of our system is mainly easier installation and easier set up process.

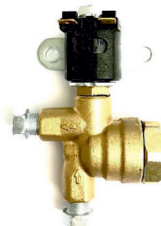

So payback time is generally less, since the fuel savings is relatively high.

Other companies can manage to 10% or 20% blend but **VIKARS** achieved at between 40% to %60 blend for commercial vehicles as buses ,trucks. According to vehicle brand, road conditions, and driving style LPG/CNG usage increases. If machines do not need to move around much so they do not change gear much as cranes, construction machinery, tractors, large generators which working with Diesel system can be converted LPG or CNG up to 70% blend.
